## **DETAILED ACTION**

## REASONS FOR ALLOWANCE

Claims 1, 3, 6-7 and 12-21 are allowed.

The prior art does not teach or suggest a fuel cell stack including all of the claimed features. The most pertinent art includes Koch et al. (U.S. Pub. No. 2003/014816 A1) and Cisar et al. (U.S. Pub. No. 2003/0232234 A1).

Both Koch et al. and Cisar et al. do not teach or suggest:

A fuel cell stack for a fuel call power plant, comprising:

a plurality of fuel cells arranged in a stack, each including a membrane electrode assembly having a proton exchange membrane between a cathode catalyst and an anode catalyst, an anode support plate adjacent said anode catalyst, a cathode support plate adjacent said cathode catalyst, a porous anode water transport plate having a fuel reactant gas flow field adjacent said anode support plate, and a porous cathode water transport plate having an oxidant reactant gas flow field adjacent to said cathode support plate,

a plurality of solid plates, selected from one or more of solid cooler plates and solid separator plates, interposed between adjacent ones of all of said cells in said stack; and water transfer means disposed in said fuel cell stack\_for transferring water only internally within said stack from said cathode water transport plate of at least one of said

fuel cells to at least one of said anode water transport plates which may be within said one fuel cell or a different fuel cell. As claimed by Applicant in claim 1.

The prior art does not teach or suggest a method of operating a fuel cell power plant including all of the claimed features. The most pertinent art includes Koch et al. (U.S. Pub. No. 2003/014816 A1) and Cisar et al. (U.S. Pub. No. 2003/0232234 A1).

having a stack of fuel cells, each fuel cell including a membrane electrode assembly having a proton exchange membrane between a cathode catalyst and an anode catalyst, an anode support plate adjacent said cathode catalyst, a cathode support plate adjacent said cathode catalyst, a porous anode water transport plate having fuel reactant gas flow field adjacent said anode support plate, and a cathode water transport plate having an oxidant reactant gas flow field adjacent to said cathode support plate, and a plurality of solid plates, selected from one or more of solid cooler plates and solid separator plates, interposed between adjacent ones of all of said cells, said method comprising;

transferring water only internally within said fuel cell stack from said cathode water transport plate of at least one of said fuel cells to at least one of said anode water transport plates which may be within said one fuel cell or a different fuel cell. As claimed by Applicant in claim 20.
